

School Management System

Deliverable #2 – User Stories and Use Cases

Team Members:

Name	Student Id
Marwan Khaled	23-101296
Youssef Idrees	23-101077
Hany Yasser	23-101107
Omar Elsayed	23-101091
Yassin Sameh	23-101192

1. User Stories

In this section, we wrote a few user stories based on the main users in our system. We tried to think about what each user really needs to do and why.

Admin: As an admin, I want to manage user accounts so that I can control who can use the system.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

Admin: As an admin, I want to generate attendance and grade reports so that I can check school performance easily.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

Teacher: As a teacher, I want to record attendance so that I can keep track of my students' presence.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

Teacher: As a teacher, I want to enter and edit grades so that students' results are always up to date.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

Student: As a student, I want to view my grades so that I know how I am doing in each class.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

Student: As a student, I want to see announcements so that I don't miss any important updates.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

Parent: As a parent, I want to see my child's grades so that I can know if they are doing well.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

Parent: As a parent, I want to check attendance records so that I can make sure my child is going to school regularly.

Acceptance Criteria (Given–When–Then):

Given a valid login, when the user goes to the correct page, then they can complete their task successfully.

2. Use Case Identification via Event Decomposition

We used the event decomposition technique to find the main use cases of our system. The table below lists the different types of events and what use cases they lead to.

Event Type	User/Stakeholder	Event Description	Use Case
External	Admin	Admin adds a new teacher account	Manage User Accounts
External	Teacher	Teacher records attendance	Record Attendance
External	Student	Student views their grades	View Grades
External	Parent	Parent views child's attendance	View Attendance
Temporal	System	System generates weekly performance	Generate Reports
Temporal	System	System performs automatic data Backup	Backup Data
State	Teacher	Teacher updates grade information	Update Grades
State	Student	New announcement is posted	View Announcements

3. Brief Use Case Descriptions

We wrote short descriptions for each main use case to explain what it does and who uses it.

Use Case	Actor	Short Description
Manage User Accounts	Admin	Add, edit, or remove user accounts.
Record Attendance	Teacher	Mark students present or absent.
View Grades	Student	See their grades for different subjects.
View Attendance	Parent	Check attendance of their child.
Generate Reports	Admin	Create simple attendance and grade reports.
Backup Data	System	Automatically back up data daily.
Update Grades	Teacher	Edit and save grades for students.
View Announcements	Student	Read the latest school updates.
